

Job Title: Platform Developer

Job Location: Remote(Work from home)

Agilea Solutions is a rapidly growing, energetic consulting company with a fun, fast-paced team environment. In this innovative company you will bring us your passion to develop, your strong technical skills, and we will provide you with the opportunity to develop an innovative automated testing platform which helps clients ensure their Workforce Management (WFM) systems can respond to rapidly changing business needs and deliver more effectively. Timekeeping, Time Off management and Scheduling are not only key components of WFM systems, but they are crucial business processes for our enterprise clients. Agilea Solutions delivers client projects using Agile methodologies, where we focus on delivering value to users by building in an iterative, collaborative manner, while seeking continuous improvement.

Our Mission: To provide our clients with innovative solutions that accelerate business agility and speed to market.

Position Summary:

The Platform Developer is responsible for providing technical expertise, leadership and execution throughout the software development lifecycle including analysis, design, development, testing and release.

Essential Duties & Responsibilities:

- Develop SaaS back-end primarily using Java technology
- Implementing the front-end using JavaScript, ReactJS, and FreeMarker templates
- Create and maintain unit and integration tests
- Automate test scenarios and test data using Selenium, Cucumber, Java, and other tools
- Assist in the execution, troubleshooting, and automation of DevOps tasks
- Maintain Bitbucket, CI/CD pipelines
- Work as part of platform team to plan features, breakdown stories, and schedule delivery
- Identify, troubleshoot, and fix defects
- Work in an Agile, sprint-driven environment
- Review and improve application security and performance
- Conduct peer code reviews
- Document software and procedures
- Build relationships with team members

Preferred Technical Expertise and Skills:

- Advanced Java, JavaScript, REST development
- Spring, JPA, Hibernate
- Strong PostgreSQL or other relational database experience
- HTML5, CSS3
- Software architecture and design
- Object oriented design patterns
- Gradle build & deployment
- Good understanding of Behavior-Driven Development (BDD)
- Excellent written and verbal communication
- Ability to work independently
- Hands-on Linux experience
